Planning a new space can be overwhelming. Many veterinarians find it extremely challenging to juggle their day-to-day responsibilities while also finding enough time to focus on their new project. In many cases, the easiest solution is to design your new space to function exactly the same way that you have been practicing for years. While this may be easy, it is not always the best strategy. Often times the architect or builder that has been selected to build your dream project may have limited or no experience designing a veterinary hospital. Does this sound familiar? The good news is that you are not alone. That’s where Midwest Veterinary Supply’s partnership with Midmark comes in.

Midmark has decades of experience designing and outfitting the clinical areas inside healthcare facilities. With the broadest equipment portfolio in the veterinary industry, Midmark has a deep understanding of how the clinical space, workflow, and technology all work together. Ideally, a discussion starts at the very beginning of your project, well before construction begins, to identify what has worked well for you and what potentially can be improved. The first topic revolves around your cabinetry needs. The Midmark Synthesis® cabinetry collection is designed to be easily configured to meet the needs of your unique space today and into the future. The steel-frame construction with seamless drawers and panels, combined with inspired aesthetics is the perfect solution to stand up to the toughest tests that happen daily in veterinary hospitals.

Your Midwest Veterinary Supply and Midmark representatives will meet with your practice leadership, tour your existing practice and potentially take field measurements so we may get a clear picture of the space available—and how we can best put it to use. During this process, we can also propose equipment that will help you reach your clinical goals and stay within budget. Next, we get our designers involved. For best results, this happens when you first start thinking about the design of your new space, and well before you settle on a final floorplan. Midmark has an in-house design team that is skilled in creating efficient, effective veterinary workspaces. Based on our understanding of the unique needs of your clinic and the rigors of the veterinary space, we will begin our initial mapping and planning.

This is when your project really starts to come together. After we’ve finalized all the details, we’ll help you place your order for all the cabinetry and equipment you’ve chosen. Midmark cabinetry is built-to-order right here in the USA. Once the order is placed, we’ll see every detail of your project through from delivery and installation to post-sale training and support. We want to make sure you get up and running with your new space quickly—and get the best use of it.

Contact your Midwest Veterinary Supply representative today to learn more about how Midwest and Midmark can assist on your next project.

Using state-of-the-art design software, Midmark will create 3D renderings of your options. We will guide you through important cost-related decisions regarding color and finish selections, countertops, handles, etc. The Midmark expert design team can create multiple configurations within the same space so you can see your options in living color.
