CENTURY DIAGNOSTIC MAGNIFYING (WOODS) LIGHT
GENERAL INSTRUCTIONS

IMPORTANT
The blacklight blue lamps of this device emit ultraviolet radiation. These lamps can be used as a diagnostic tool for clinical examinations of the skin and scalp. The purpose of the ultraviolet light is to identify, observe, analyze, or investigate abnormalities of the skin and scalp or for contact lens fitting. CAUTION: Long term exposure to the ultraviolet light is not recommended. Any examination utilizing the blacklight blue lamps should be limited to 15 minutes maximum.

OPERATION
Plug the power cord into an AC outlet. With the handle toward you, find the switch on the right. Press the left side of that switch with a raised “bump” until the two while lamps turn on. Press the right side of the switch to turn the lamps off. The switch to the left of the handle will operate the two ultraviolet lamps. Only one set of lamps will operate at time. If the lamps do not turn on, the connection in the sockets may be loose. Remove the lamps and reinstall using the following section for this procedure.

MAINTENANCE
Note: Remove the inner white lamps first for easier access to the ultraviolet lamps.
Lamp Removal
Unplug the power cord from the AC outlet. Use both hands to hold the ends of the lamp with your thumbs and index fingers. Rotate the lamp up toward you ¼ turn and then lift both ends out at the same time.
Note: First install the two ultraviolet lamps in the four outer sockets.
Lamp Installation
Check that the power cord is unplugged from the AC outlet. Use both hands to hold the ends of the lamp with your thumbs and index fingers. Hold the lamp over a set of two sockets and align the lamp pins with the socket openings. Lower the pins into the openings at the same time. Rotate the lamp down and away from you ¼ turn until it is fully seated. Plug the cord into an outlet and check for proper light operation.

CLEANING
IMPORTANT: Unplug the power cord from the AC outlet before cleaning the light.
Use a clean, soft cloth with a mild soap and water mixture to clean all parts of the light. Do not use harsh cleaning agents.

LAMP REPLACEMENT
To order lamps use: White Lamps – Medical Illumination Part Number 0001481.
Ultraviolet Lamps – Medical Illumination Part Number 0001482.
