**J-153w Walpole’s Solution.** This buffered solution will dissolve struvite plugs in feline urethral obstructions. Only 3–6cc of Walpole’s will atraumatically dissolve the crystal plug. Conventional methods of retrograde flushing with saline cause urethral damage or ruptures and eventual stricture formation. Jackson cat catheters are recommended for best results when using Walpole’s solution. 50cc bottle.

**Olive Tipped FUS Needle.** 21g olive tipped needles are perfect for flushing of the small male feline urethra in cases of obstructive FLUTD. The blunt tip prevents trauma to the sensitive urethral lining. Rather than forcing struvite plugs back into the bladder with saline, it is suggested that J-153w Walpole’s solution is infused to dissolve away any crystal formation. Then a J-153 series Jackson catheter is inserted to ensure urethral patency. Luer mount fits any syringe. Stainless steel. Autoclavable. Individually packaged.

- J-153c  FUS Needle. 21g x 1/2”.
- J-153d  FUS Needle. 21g x 1”.
- J-153e  FUS Needle. 21g x 1 1/2”.

**Tomcat Catheter** with luer fitting and suture holes is more bio-friendly. Wire guide stylet included.

- J-153x  Catheter, Closed End. 3.5fr x 5” (12cm).
- J-153y  Catheter, Open End. 3.5fr x 5” (12cm).

**J-153 Silicone Feline Urethrostomy Tube.** Silicone urethral catheter designed for use in initial feline urethrostomy procedures to prevent post-operative constriction or maintain urethral patency over time. Suture eyelets permit fixation to perineal area open end. Female luer fitting x 3” tube (can be trimmed to desired length) 0.073” ID x 0.125” OD sterile. Stylet.

**J-1113 Cath Link Luerlock adapter.** Many urinary catheters and feeding tubes i.e. small red rubber tubes do not have the right connection to hook directly to a syringe. This luer lock adapter has a barbed fitting that fits tight in urinary catheter or feeding tubes. Sterile and autoclavable.
